

APPLICATIONS

- Feedlots
- Extreme industrial environments:
 - Quarries and construction sites
 - Coal mines and terminals
 - Haul roads

1. BIG GUN SPRINKLERS

Features

- Delivers high volume in short time
- Heavy duty-construction ensures long wear life and reliability
- Rugged durability in dirty and corrosive conditions.
- Large nozzles less likely to plug
- All ball bearings are sealed
- Great range of pressure, flow rates, trajectories, and connections
- Available in part circle and full circle models
- Easy to operate, maintain and repair

2. TWIG WIRELESS CONTROL SYSTEM

Turns valves on and off in the most simple and reliable way possible.

It eliminates unnecessary features and troublesome wires.

Features

- Control system consists of a TD200 Controller capable of controlling up to 100 TWIGs in a programmed sequence.
- Simple and easy to use
- Reduces labour requirements
- Allows you to put the right amount of water where you need it most.

3. CONTROL VALVES

Series 800

Series 1000

Features

- 800 series is geared to handle tough agricultural environments.
- The modular design of the 1000 series provides ultimate flexibility in valve style and connection type while simplifying installation, trouble shooting and maintenance
